

Assembly & Flight Instructions for **In the Breeze** 2 Line Air Foil Kites

ASSEMBLY INSTRUCTION:

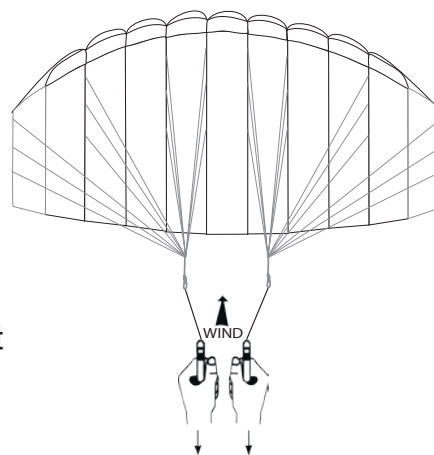

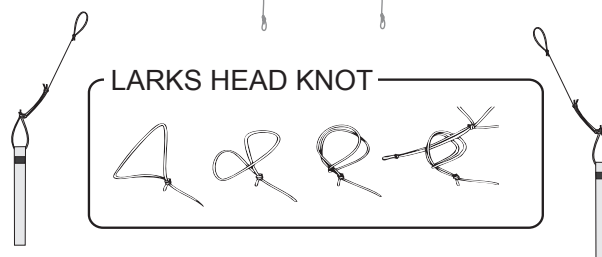

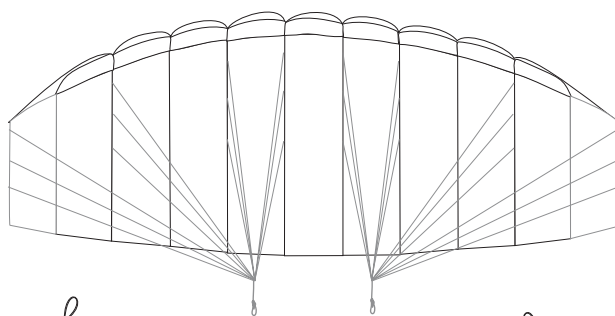

Clear your bridle lines so they look like this

CONNECT FLYING LINES TO THE KITE:

Unwind and lay out your flying lines, make sure they are of equal length.

Prepare a Larks Head knot (see diagram) in the colored loops at the end of each line, slide the knot over the end of the matching colored string on the kite bridle and secure by pulling the Larks Head knot tight.

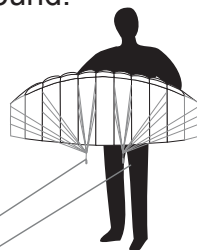

Remember: Red loops and red handle are in right hand and on right side of kite.

LAUNCHING & FLYING YOUR KITE:

Make sure your back is to the wind, and the lines are fully extended and even. With equal pressure on both lines and elbows slightly bent, pull gently while taking a couple of steps backwards (a helper holding the kite upward will make your first flights easier).

To turn the kite to the right (clockwise) pull with your right hand. To turn left (counter clockwise) pull with your left hand. Always keep your arms comfortably in front of you with your elbows slightly bent, as if holding onto the handlebars of a bicycle, never over your head! To land the kite, depower it by flying to the extreme left or right and it will land gently on the ground.

Beaufort Wind Scale		
Beaufort Number	Wind Speed (mph)	Flag Behavior
1	1-3	
2	4-7	
3	8-12	
4	13-18	
5	19-24	
6	25-31
