
Assembly Instructions for *In the Breeze* Baby Spinners

1. Find the two diagonal starting holes on the wing hub (marked with a white dot).
2. Insert a wing into diagonally marked holes. Make sure the printed side of the wing faces the head of your baby spinner.
3. *For Baby Spinners with 4 wings*
Repeat process, skipping 1 set of holes so the 4 wings are evenly spaced.

For Baby Spinners with 6 wings

Repeat process without skipping holes so the 6 wings are evenly spaced.

NOTE: For use in high winds and for extra durability we recommend using epoxy glue in the holes to permanently hold the wings in place.
